

S1 – VisualIntent Proof Screens

390×844 iPhone goldens · deterministic scoring compositions

🔍 Review instructions — check each screen against these

- **1 · Visual difference (PASS/FAIL):** the 3 screens must look *obviously different* in density / corner radius / hierarchy — each matching its caption. Same app boilerplate is expected; the *visual tone* must differ.
- **2 · Caption fidelity (PASS/FAIL):** tasks=friendly/rounded → soft, rounded cards; hr_service=professional/sharp/strong → sharp corners, strong hero; ledgerly=premium/soft → refined, soft surfaces.
- **3 · No hardcoded style (PASS/FAIL):** every visual value flows from `visualStyle` → scoring → existing tokens. If a screen shows colors/spacing/radius that feel arbitrary (not from the design tokens), flag it.
- **4 · Trust boundary (PASS/FAIL):** an unattested `visualStyle` value must BLOCK generation — no silent visual decisions without human approval (verified in CI, not visible in these images).
- **5 · Determinism (PASS/FAIL):** re-running generation on the same IR must produce byte-identical output (verified in CI, not visible in these images).
- **Verdict:** approve → S1 ships; request changes → list the failing item(s) above and what should change.

tasks
TaskListScreen

personality: friendly · cornerRadius: rounded

Form-heavy utility app — generous spacing, rounded list cards.

hr_service
LeaveRequestDetailScreen

personality: professional · cornerRadius: sharp · hierarchy: strong

Professional dashboard — sharp corners, strong hero block, tight rhythm.

ledgerly
ExpenseClaimListScreen

personality: premium · cornerRadius: soft

Premium finance app — soft surfaces, refined spacing.
